Dear Hiring Team

In reply to your advertisement on Seek.co.nz (21-September-2017), I would like to apply for the position of a Graduate Software Developer.

I am currently in my final year at AUT University completing the Bachelor of Computer and Information Science major in Software Development in the month of December 2017. My study has confirmed for me a strong interest in the area of software engineering and web development.

Building website has been my passion before I started my first year of University studies. For the past three years I have made quite a few of web application and software projects from different programming languages, through these years of making projects I have also developed my communication, collaboration and problem-solving skills.

I am self-motivated person who is willing to go above and beyond on any project, and to learn valuable skills on my own time. For example, I taught myself the fundamentals of making dynamic website using HTML, CSS, AJAX JQuery for client side and PHP as server side. Additionally, I also learn the basic of cloud computing using AWS such as making a RDS database that run a MySQL environment and also hosting a website through Elastic Beanstalk which can be seen on this link: <http://instillerygametracker-env.ytj9pwuqtq.us-east-2.elasticbeanstalk.com/>.

Overtime, I have also uploaded my personal project in my Github account <https://github.com/tolmike23> which might be a relevant to showcase my skills in the role I am applying for.

Please find enclosed my current CV. I look forward to hearing from you to discuss my application further.

Yours sincerely

John Barraca
